**Burlington, ON, April, 2008 - Announcing the release of Questica SE 3.0.**

“Questica is proud to announce the release of Questica SE 3.0. After much collaboration with our customers, we believe our leading-edge software will generate more efficiencies in the ETO process, resulting in even greater productivity and profitability”, states Questica’s President, TJ Parass.

**Questica SE is the only ERP software system developed by and for Engineer-to-Order custom manufacturers.**

Unlike other systems designed to suit several types of manufacturing, Questica SE is solely designed, from inception, for the custom design ETO business. Every single Questica client is an ETO manufacturer.

A highlight of the key new/upgraded features:

New Graphical User Interface: Every screen has been updated for added features, such as date pull downs, resizing of fields, and better overall layout. Additionally, a new 'ribbon' method has been added for our main menu, and all the other departmental menus (BOM, Sales, etc), allowing easier access to the various areas within the application.

Support for Autodesk Inventor: Similar to the SolidWorks plug-in, this allows designers to push BOMs from Inventor into Questica SE, preventing data entry errors, and speeding up the whole design process.

Improved Installer: New installer will allow administrators to implement Questica SE updates much smoother and faster. The IT department will only have to update the database, and the next time a user tries to connect to the updated database, their machine will be automatically updated.

Support for Crystal Reports 2008: Questica SE now supports Crystal Reports 2008 allowing you additional flexibility in developing you own custom reports.

Improved Screens including Customization: Screens are now adjustable and feature rich allowing for dynamic sorting, filtering, grouping, re-arranging, hiding of columns, and resizing by the user.

**About Questica Inc.**

Questica Inc., established in 1998, is a software company focused on database-based products. As a Microsoft Gold Partner, Questica utilizes leading technologies such as SQL Server and the Microsoft .NET Framework to provide complete web-based business solutions.

**About Questica SE**

Questica SE is a leading-edge business solution developed exclusively for custom design ETO manufacturers. This industry developed solution integrates all aspects of the business cycle from Sales, Engineering, Purchasing, Production, and Accounting, accommodating the continuous design changes typical of custom manufacturing. Questica SE eliminates information duplication and provides real time costing and critical management information needed to succeed. Questica SE can dramatically increase your productivity, and decrease costs without additional staff.
